Education

Vellore Institute of Technology

Bachelor of Technology (B.Tech) in Computer Science (AI & ML) | CGPA: 7.71

2023 – 2027

Bhopal, India

Technical Skills

- **Languages:** Python, C++, SQL
- **AI/ML:** TensorFlow, PyTorch, Scikit-Learn, XGBoost, Pandas, NumPy, NLP, FinBERT
- **Generative AI:** Retrieval-Augmented Generation (RAG), Prompt Engineering, Groq API
- **Frameworks & Web:** Flask, FastAPI, React, REST APIs
- **Databases & Tools:** PostgreSQL, AWS, Git, GitHub, Google Colab

Work Experience

Web Development Intern – Lex Mente

Legal Research Journal Platform | lexmente.in

2026

Remote

- Designed and developed the official responsive website for Lex Mente, a legal research journal platform, with structured pages for journal content, policies, editorial board, and contact information.
- Implemented a journal archive with downloadable research-paper PDFs and a dedicated Call for Papers submission section to support the publication workflow.
- Delivered and deployed a production-ready website directly for a real client with a clean, professional, and responsive user experience.

Projects

C2C – Conflict-to-Capital Intelligence Dashboard | [GitHub](#) | *FastAPI, React, FinBERT, PostgreSQL*

- Built a geopolitical risk-to-market intelligence platform using a **3-service architecture** with React, FastAPI, and PostgreSQL.
- Designed **9 REST API endpoints** covering incident intelligence, country risk, portfolio exposure, knowledge graphs, sector impact, sentiment trends, and incident-volume analytics.
- Implemented a **2-stage NLP pipeline** using FinBERT sentiment embeddings and a logistic-regression classifier to categorize incidents across **4 risk levels**.

CRS – Intelligent Crop Recommendation System | [GitHub](#) | *Python, Flask, TensorFlow, XGBoost, ESP8266, OpenWeather API*

- Engineered a multi-modal crop recommendation platform combining soil imagery, IoT sensor readings, and live weather data into a unified ML inference pipeline.
- Built a MobileNetV2 CNN for **7 soil classes** and an XGBoost classifier for **22 crop classes** using a **10-feature** engineered input vector, achieving **80%+** and **85%+** accuracy respectively.
- Developed **5 Flask endpoints** integrating ESP8266/DHT11 sensor data and OpenWeather API inputs to generate top-3 crop recommendations with confidence scores.

Task Management System | [GitHub](#) | *Flask, MySQL, JavaScript, REST APIs*

- Built a full-stack task management system with a Flask backend and a MySQL database, featuring separate Admin and Employee dashboards for task assignment and progress tracking.
- Implemented session-based authentication with bcrypt password hashing and modular REST APIs for auth, employee, task, and assignment operations organized as Flask blueprints.
- Developed a vanilla JavaScript frontend integrated with the backend REST endpoints for dynamic dashboard rendering and real-time task status updates.

Certifications

- **Google IT Support Professional Certificate** – Google Career Certificates (2026)
- **AWS Technical Essentials** – Amazon Web Services Training (2025)
- **Networking Basics** – Cisco Networking Academy (2024)
